- Python

PROJECTS

CLOUD POWER NOTE UPLOAD AND STORAGE SYTEM

The objective of the project is to enable users to securely upload, store and manage their notes efficiently. This project is built with html, CSS, JAVA Script, react.js, node.js and JWT components for user authentication and implement AWS cloud for storing the notes. By which the notes are stored efficiently with higher security and durability.

FACE RECOBNIZATION SYSTEM USING OPEN CV

The main objective of the Face recognition system project is to develop an intelligent, machine learning-based solution that can accurately detect, extract, and recognize human faces from images or videos for secure identification, authentication, and access control applications.
